I am Front-End Developer with impeccable creative skills in creating exceptional clients side web application, implementing highly structured, well developed, customized and responsive web site that create vast user experience with perfect functionality.

Projects I have worked on.

- **Paychant UI kit and Icons**

I work with Paychant as freelance Graphic User Interface Designer building the company's icons and UI Demo kit for the web. You can find my jobs on the landing page of Paychant Website.

- **Hover Essentials Website**

A static website built with react for a transportation website this was my first website I build using, working in the project really thought me a lot about react-router, react-bootstrap and the likes.

- **Peachy Concept Website**

A fully functional web application built with bootstrap, CSS framework, I join a group of team to work on a client project which I received and with many months of practice I was able to deliver a fully responsive and functioning web application with PHP running on the server side.
